### NORTH DAKOTA'S CHILD PASSENGER SAFETY LAW

- Children younger than 7 are required to ride in a child restraint (car seat or booster seat). The restraint must be used correctly – following the manufacturer's instructions.
- A seat belt may be substituted for children younger than 7 who weigh more than 80 pounds and are more than 57 (4'9") inches tall.
- A lap belt may be used by children who weigh more than 40 pounds who ride in vehicles with lap-only seat belts or if all lap and shoulder belts are used by other occupants. (This is because booster seats require both a lap and shoulder belt for correct use.)
- Children ages 7 through 17 must be properly secured in a seat belt or child restraint (car seat or booster seat).
- The law applies to all seating positions front seat and back.
- The driver is responsible for ensuring that all occupants younger than 18 are buckled up in the appropriate restraint.
- · The penalty for violation is \$25 and one point against the license of the driver.

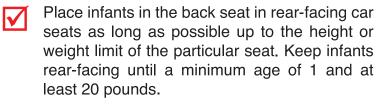

### **Attention Parents and Caregivers**

#### **Confused?**

To help you select the right child restraint for your child's age and weight, the North Dakota Department of Health offers the following guidelines for buckling up children.

### INFANT SEATS!

## TODDLER SEATS!

When children outgrow their rear-facing seats (at a minimum age 1 and at least 20 pounds), they should ride in forward-facing car seats in the back seat until they reach the upper weight or height limit of the particular seat.

### BOOSTER SEATS!

Children who weigh between 40 and 80 pounds and are less than 4'9" tall should use a booster seat to position the lap and shoulder belt.

### SEAT BELTS!

Kids who weigh more than 80 pounds and are more than 4'9" tall should use a seat belt. To check the correct fit of a seat belt, refer to the five-step test below.

# 5-STEP TEST!

- ✓ Is the child seated all the way back against the vehicle seat?
- ✓ Do the child's knees bend comfortably at the end of the seat?
- ✓ Is the lap belt low on the hip bones?
- Is the shoulder belt centered on the shoulder and chest?
- Can the child stay seated like this for the whole trip?

If you answered "no" to any of these questions, your child may need a booster seat to ride safely.

✓ Children 12 and younger should ride in the back seat – even if your vehicle doesn't have airbags.

**STILL CONFUSED?** If you have other questions about the safest way for your child to ride, please call the North Dakota Department of Health at 800.472.2286 (press 1).
